Rubenfield et al.

APPLICANT: MARC J. Rubenfield and AMINO ACID SEQUENCES RELATING TO E

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO E

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 6739

LENGTH: 1413

TYPE: DNA

ORGANISM: Pseudomonas aeruginosa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 38, Application US/09651656
Patent NO. 6340566
GRMERAL INFORMATION:
APPLICANT: MCCUTHEN-MALONEY, SANDRA
APPLICANT: LAWRENCE LIVERNORE NATIONAL LABORATORY
APPLICANT: LAWRENCE LIVERNORE NATIONAL LABORATORY
TITLE OF INVENTION: DETECTION AND QUANTITATION OF SINGLE NUCLEOTIDE
TITLE OF INVENTION: POLYMORPHISMS, DNA SEQUENCE VARIATIONS, DNA MUTATIONS,
TITLE DEFENSACE. TITLE OF INVENTION: DNA DAMAGE AND DNA MISMATCHES
                                                                                                                                                                                                                                                                                             Sequence 38, Application US/09650855 Patent No. 6365355 GENERAL INFORMATION:

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 03796-032

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US/0955,778

PRIOR FILING DATE: 1997-08-15

PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOFTWARE: PatentIn version 3.1 SEQ ID NO 1710

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB seq

                                                     This invention relates to a novel screening method for identifying an CC individual having a predisposition towards a cancer. Specifically, it CC refers to obtaining a test sample, preferably comprising the hMYH gene that occurs in the base excision repair (BER) pathway, and comparing this CC nucleic acid molecule to the corresponding region of the wild type Sequence. This BER pathway gene, hMYH, acts to protect against G:C to T:A CC transverse mutations in a cancer marker gene such as APC that is seen in CC familial adenomatous polyposis (FAP). As such, mutations identified in CC this may be associated with the onset multiple colorectal adenomas and CC carcinoma. The present invention describes a screening method for CC individuals that works to identify differences comprising any one of CC 382D, Y165C, B466X or Y90X variations in hMYH, this signifies a cancer CC predisposition, particularly for bowel cancer. This polynucleotide Sequence is the mutant G1396T hMYH cDNA that encodes a E466X mutation in CC the encoded polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening, diagnostic and therapeutic methods in individuals with predisposition towards having a cancer, such as colon cancer, usi excision repair pathway or hMYH genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  allel

```
Screening, diagnostic and therapeutic methods in individuals with predisposition towards having a cancer, such as colon cancer, using base excision repair pathway or hMYH genes.
```

This invention relates to a novel screening method for identifying an CC individual having a predisposition towards a cancer. Specifically, it refers to obtaining a test sample, preferably comprising the hMYH gene that occurs in the base excision repair (BER) pathway, and comparing this curleic acid molecule to the corresponding region of the wild type sequence. This BER pathway gene, hMYH, acts to protect against G:C to T:A transverse mutations in a cancer marker gene such as APC that is seen in familial adenomatous polyposis (FAP). As such, mutations identified in hMYH are associated with the onset multiple colorectal adenomas and carcinoma. The present invention describes a screening method for individuals that works to identify differences comprising any one of G382D, Y165C, E466X or Y90X variations in hMYH, this signifies a cancer predisposition, particularly for bowel cancer. This polynucleotide sequence is the mutant C270A hMYH CDNA that encodes a Y90X mutation in polypeptide of the invention. G:C to T:A this

                                                                                                                                                                                                                                                                                                                                                            The specification describes a method for determining the risk of a subject to develop cancer. The method comprises determining a level of parameter indicative of a level of activity of a DNA repair/damage preventing enzyme in a tissue of the subject, and determining the risk of the subject to develop the cancer according to the level. The method is useful for determining risk of developing cancer, evaluating effectiveness and dosage of a cancer therapy, and determining the presence of correlation or non-correlation between activity of at least one DNA repair enzyme and a cancer for prevention, early detection and prognosis of cancer. ABV72432-43 encode DNA repair/damage preventing enzymes, whose level or activity may be determined in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC to the Escherichia coli MutY protein involved in the pathway that CC corrects A/G and A/C mismatches as well as adenines paired with 7,8-CC dihydro-8-oxo-deoxyguanine in mutatted DNA. It was isolated from a cDNA CC library derived from human cerebellum tissue. The hMYH gene contains 15 cintrons and is 7.1 kb long. Some naturally occurring allelic variants of CC the coding sequence have been identified. Polynucleotides at least 70% CC and comprising at least 30 nucleotides, can be incorporated into a vector CC and used for production of recombinant polypeptides in host cells. The CC muty polypeptide, or the polynucleotide encoding it, can be used e.g. to creatir oxidative damage to DNA, to prevent mutations from oxidative CC repair oxidative damage to DNA, to prevent mutations from oxidative e.g. CC createrma pigmentosum and neoplasis, and to diagnose an abnormal CC transformation or a susceptibility to abnormal transformation of cells, CC particularly in a non-polyposis colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                        맑
                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                         CC antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral; CC dermatological; neuroprotective; cardiant; thrombolytic; coagulant; CC dermatological; neuroprotective; cardiant; thrombolytic; coagulant; CC dermatological; neuroprotective; cardiant; thrombolytic; coagulant; CC dermatological; neuroprotectic and antiangiogenic. The conditions or coagulant polypeptides and antiangiogenic. The conditions or coagularing medical conditions and diagnosing pathological conditions. CC polynucleotides, polypeptides, antibodies, apoints and antagonists from cC polynucleotides, polypeptides, antibodies, coagular disorders by activating cc rinhibiting the proliferation, differentiation or mobilisation of cC immune cells, to treat disorders of heematopoietic cells, aucoimmune cC disorders, allergic reactions, graft versus host disease and organ cc rejection, modulate haemostatic or thrombolytic activity, modulate cc inflammation, cancers, cardiovascular disorders, neurological disease and cc agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAA4440 represent sequences used in the exemplification of the argent invention.
                                                                                                                                                                                                                                                    Query Match

The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 1016-1017; 2352pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer.

This BER pathway gene, hMYH, acts to protect against G:C to T:A transverse mutations in a cancer marker gene such as APC that is seen in familial adenomatous polyposis (FAP). As such, mutations identified in hMYH are associated with the onset multiple colorectal adenomas and carrinoma. The present invention describes a screening method for individuals that works to identify differences comprising any one of G382D, Y165C, E466X or Y90X variations in hMYH, this signifies a cancer predisposition, particularly for bowel cancer. This polymucleotide sequence is the mutant A494G hMYH cDNA that encodes a Y165C mutation in the encoded polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1608 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel screening method for identifying an individual having a predisposition towards a cancer. Specifically, it refers to obtaining a test sample, preferably comprising the hMYH gene that occurs in the base excision repair (BER) pathway, and comparing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 8; SEQ ID NO 1; 66pp; English.

                                                  The present invention describes the full length genome of Neisseria CC meningitidis B (NMB). The sequences in AAP21544 and AAF21607 to AAF21613 CC represent fragments of the NMB genomic sequence, as the sequence was too CC long to go in a record on its own it was split into 8 sequences which CC (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of CC (i.e. the last 49980 bp of AAF21547 are repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21507 are repeated at the beginning of CC Given in AAB5859 to AAF21545 to AAF21588 encode the Neisseria proteins CC grimers which are used in the exemplification of the present invention.

CC The NMB genome and fragments from it have antibacterial activity, and can be used in vaccines and gene therapy. Neisseria nucleic acids, proteins CC and/or antibodies which binds to the proteins can be used in compositions CC diagnostic reagent for detecting the presence of Neisserial bacteria or as a CC diagnostic reagent for detecting the presence of Neisserial bacteria or CC computer storage medium or computer databases can be used in a search to CC identify open reading frames (ORFs) or coding sequences within the NMB CC genome. The DNA sequences provide further opportunities to find antigenic CC outer membrane proteins which are more effective in vaccines than the CC outer membrane proteins currently used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Neisseria meningitidis B full length frames are used to detect, treat and

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in other Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genomic sequenced tags (GST), examining the array, and determining relative gene expression by an observed hybridisation reporter signal of relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pifferential gene expression; genomic sequenced tag; GST;
altered culture condition; environmental stress;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacillus licheniformis genomic sequence tag

Extensive follow environmental stress or other physiological provocation. Extensive follow environmental stress or other physiological provocation. Extensive follow environmental stress one spot on an array equals one gene or one open reading frame, since sequence information is available. This sequence rag (GST) used in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to proteins from Neisseria gonorrhoese. Also disclosed are the nucleic acid molecules encoding the proteins an antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoese infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid molecules of the invention
